

Journal

Journal

Ben. Franklen

Samuel T. Brainerd

Rochester

Mass.

Returning home this voyage I forgot to take
with me a paper book for keeping a journal
and up to this time I have done no more
than to keep an account of the daily position
of the ship with a few remarks upon the
state of the weather. However it is of but
little importance, as there has nothing trans-
pired but what might be as well forgotten
as remembered.

We left home on the 8th of
May 1866. had rough stormy weather for
the most part up to the middle of June
since then we have had much good weather
Cruised from Lat $22^{\circ} 00'$ to $42^{\circ} 00'$ North and
from 10° to 52° W. Saw plenty of Grampus
some black fish, and one sperm whale
which we had no chance to catch. Went into

Trayal for letters and recruits on the 17th of Aug
Came out on the 18th found one letter undelivered
27 May ^{written} 20 days after my departure. There
were letters for the officers as late as the 20th
1st of July yet I dont think that there has
anything happened to my family if there had
some one would have written. Probably the letters
did not have postage enough paid on them at
the time of starting and were deposed when that
was exarsted

August 1866.

Sunday 19th

Wind Westward strong breeze, large
Sea and lay. Steered by the wind
39° 0'0" till 6 A.M. then kept away to the
Sun 27° 20' Eastward. Saw Col. Graecia to the
North. Saw Water working to windward
porpoises and Grampuses. At sunset
we were off the North side of Pereira

This is the first writing I have
done for many days I have
been very sick but thanks be
to God I am better now I have
been suffering with pains all
over my body legs and arms
for four months and on the
21st of last month they all
concentrated in my neck and
and head and for three or

chrys the odds are rather against
me but by sharing my heart and
putting on thistles I kept from going
crazy with dreadfull pain that would
melt my heart and body around
The back part of my head and neck
is much swollen now I know not
what will be the result I have lost
much flesh have at times some
numbness of the heart in short
Sam Bruley is pretty nearly used
up

Lon $39^{\circ} 52'$

Thur 29th

August 1867.

Wind South Eastward light breeze till 1 P.M. then fresh till 6 then light to the end Strong current to the Northward At 2.30 P.M. fore up and run for the N end of Yannitar at 8 came to anchor in 12 fathoms Water about 15 miles from the port of Yannitar

Fri 30

Wind Southward fresh breeze and fair weather At 7 A.M. started with my boat for the Port for the sole purpose of discharging four sick men pulled till 2 P.M. and landed at the port and reported at the Consulate Went to several business men in

and endeavoured to negotiate a
draft for the requisite sum to enable
me to pay the three months extra
wages required by law for Seamen in
a foreign port: the total sum with
Certificates and tonnage dues one hundred
Twenty-seven dollars and Twenty-two¹²
cents I could get no one to take my
draft for the simple reason that they
had no money to spare for that purpose
being plagued to get money to carry
on their business. Left at 4 P.M. for
the ship which I reached at 6.30 P.M.

Sat 30

Wind southward fresh breeze and fair
Weather at 6 A.M. got under way and
worked to the windward for the Port.

Continued the same till sunset at which time I thought myself to the windward of all the shoals that lie to the S.W. of the anchorage at 7 P.M. tacked and headed for the port in two minutes after found the water began to shoal suddenly: put the wheel up but she did not mind it but still on to a bank of soft sand without thumping at all. Took in all sail at once she heeled over to port as the tide left her and lay perfectly quiet in the soft sand. The tide had been running Ebb about an hour when she went on. Started six casks of water in main hold and two in fore hold at 11 P.M. the tide was down and the vessel lay high and dry on the sand so ended

Sun August 31st

Begins with a light breeze from S.E. at 3.30 A.M. the vessel was afloat made sail and run off the bank and anchored in 7 fathoms at 6 got under way again and steered for the anchorage. Went to the masthead myself to look out for shoal water at about 7. ~~A.M.~~ P.M. While the vessel was getting no ground at 10 fathoms I perceived the appearance of shoal water a little off the bow close to put the helm down but the wind being light she did not come up quick enough to prevent her from sticking this time on hard sand and small pieces of coral Clewed up the sails.

and run a kedge out and hauled
the lines taut. The vessel heeled to
starboard as the tide left her. The tide
had been running all about an hour
and a half. She heeled over much far-
ther this time than she did before owing
to the hardness of the ground that did
not allow the keel to settle into it
which brought a great strain on her bilge
besides the ground was uneven which
allowed her head to drop some which
opened the butts in waterway and plank
shear about half an inch. Ricked the
copper on her side so that it tore out
the nail heads. There was about a foot
of water under her at low water. Struck
about 120 lbs water as the tide began

to make found that she began
to leak and made water quite fast
till she began to right but we soon
freed her with the pumps at 3.30
she came up on her keel and we
began to haul on the keelwarp
and soon had her afloat. Made
sail, ran round the sand patch
worked up to the anchorage and
came to in 13 fathoms after she
she came off, the bulks in the water
way came nearly back to their place
but I fear she is badly strained as
the starboard side is much out of
the proper sheer though she makes
but little water say 3 strokes per hour
when I found that she was making

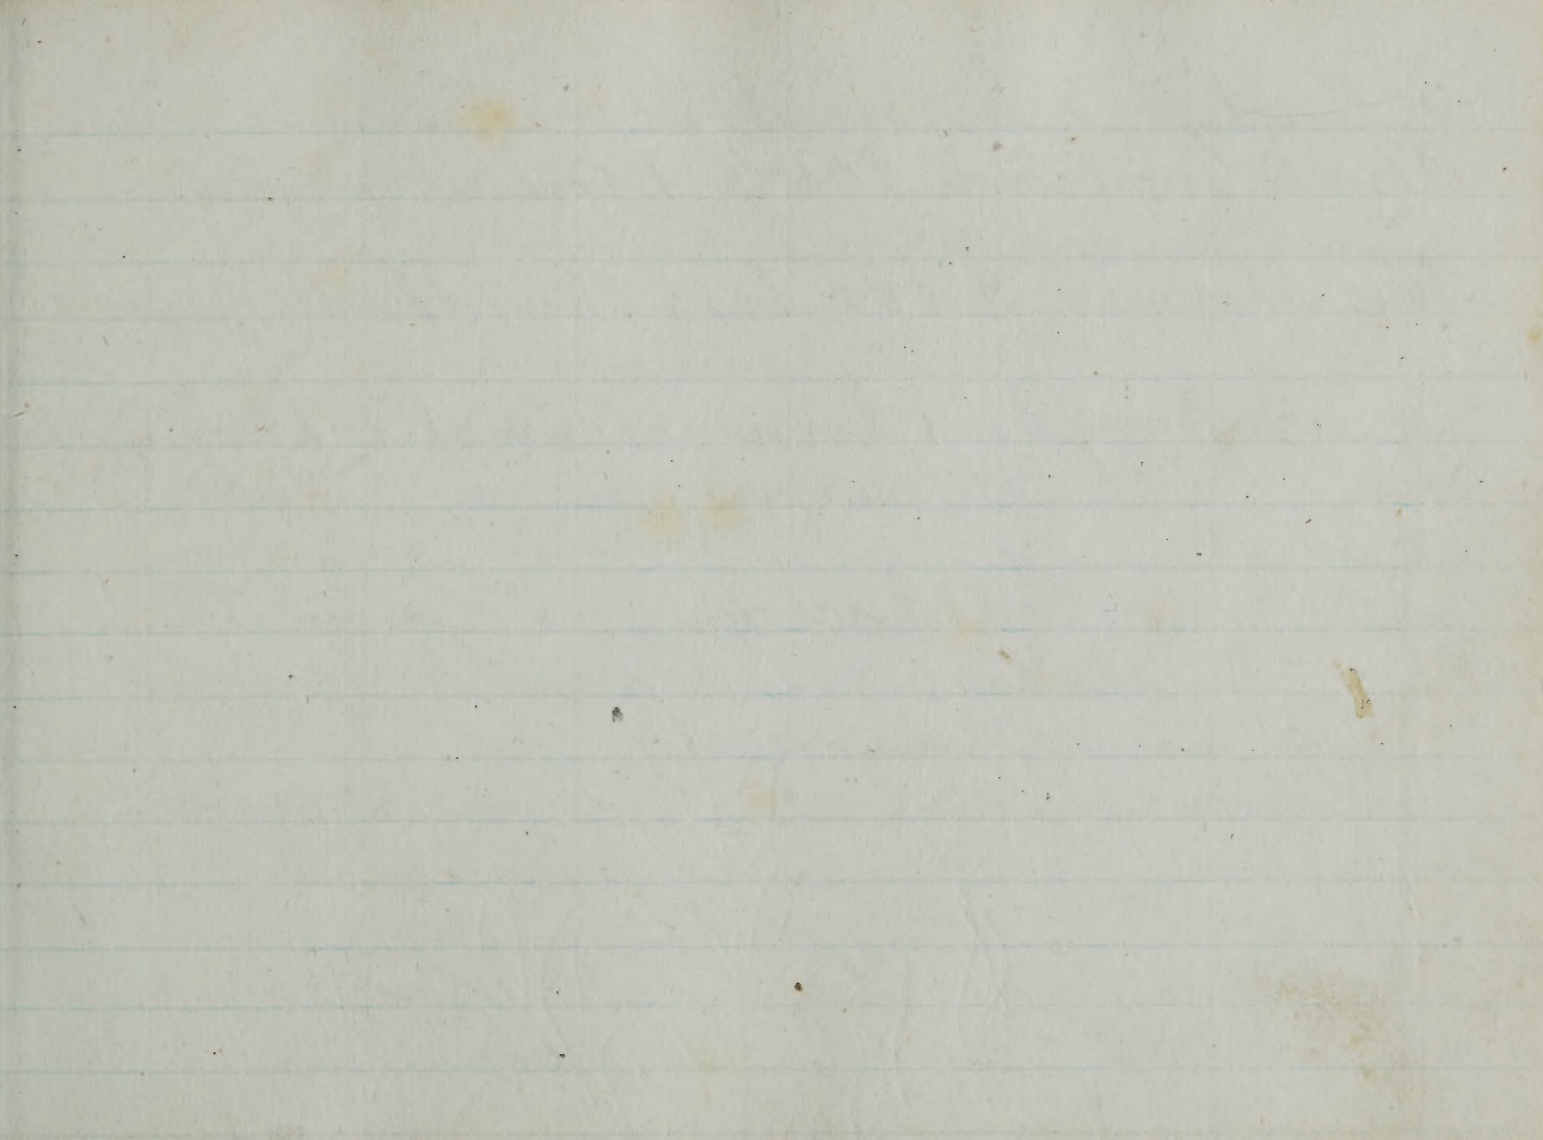

water so first I ordered the decks
cleared of all incumbrances and
the hatchways also so we threw over
about 100 bbls cork and about six
cords fire wood

Mon Sept 17th 1867.

At 8 A.M. went on shore
reported to the Consul and entered a
Protest vessel leaks the same 30 stb
Consul at my request appointed men
to hold a survey on the vessel
FILES 2nd

At 7 A.M. the surveyors came
on board and examined the vessel
and sound the pumps and sealed
them up at 1 P.M. came again
sounded the pump, and made their
